PROFESSIONAL EXPERIENCE

AI Agent Engineering & Business Intelligence Extern

Apr 2026 – Sep 2026

Extern (Client: Wayfair)

Remote

- Automated **3** AI-powered workflows with **Google Gemini**, cutting manual report verification steps from **five to two** per report; unified trend, competitor, and insight tracking into one live **dashboard**, translating Wayfair's Rugs-category requirements into a single automated source of truth.

Operational Strategy & People Analytics Extern

Jan 2026 – Apr 2026

Extern (Client: Amazon)

Remote

- Analyzed **1,000+** feedback records for sentiment trends across **14** workforce metrics using **Python (Pandas, NLTK, VADER)**, uncovering where employee experience was breaking down across **3** operational teams.
- Automated data cleaning and validation workflows via **Python scripting**, cutting manual data-quality checks from **3 hours to under 45 minutes** per cycle.
- Delivered **3 executive-ready reports** translating raw findings into actionable recommendations, shaping near-term stakeholder priorities and workforce planning.

System Engineer Trainee

Sep 2025 – Jan 2026

Infosys Limited

Mysuru, Karnataka

- Executed **100+** SQL queries (joins, subqueries, aggregations) and practiced relational database design (normalization, indexing, schema design); piloted a **daily 1-hour** peer storytelling session for **10-15** trainees, easing stress and isolation.

ANALYTICS PROJECTS

Agentic AI Data Analyst | Python, SQL, Claude Code, dbt, Streamlit

[GitHub](#) | [Live Demo](#)

- Engineered an AI system of **7** specialized agents on **Claude Code** that answers plain-English business questions using **SQL**, statistics, or **ML**; added **40** automated data checks (**dbt**) and a **24-test** suite that runs automatically on every update (**GitHub Actions**).
- Built and validated a **churn-prediction model (AUC 0.6675)** on **B2B SaaS** usage data (**500** accounts, **50K+** events); statistically tested a 35% churn difference and found it was not yet proven (**p=0.075**), preventing a premature retention decision based on a false pattern.
- Deployed a live **Streamlit** dashboard tracking user engagement, revenue growth from existing customers (**108.5%**), and churn-risk scores; designed a multi-cloud (**AWS/GCP/Azure**) deployment plan (**Terraform**) for production scaling.

Supply Chain Business Intelligence Analysis | SQL, Python, PySpark, Snowflake, Tableau

[GitHub](#) | [Live Demo](#)

- Quantified a systemic **2-day** fulfillment delay across **180K+** supply chain records using **SQL**, pinpointing a **95%** missed-deadline rate in premium shipping tiers.
- Engineered an **A/B testing** framework across **4** shipping modes; confirmed a real, statistically-backed improvement in **3** tiers (**p<0.001**) while confirming Standard Class needed no change (**p=0.951**).
- Deployed a **Tableau** dashboard (key metrics, a regional map of missed deadlines, shipping-mode comparisons); found a uniform **54%** failure rate across all customer spend tiers, ruling out high-value customers as the cause.

Customer & Revenue Analytics | AWS, SQL, Python, Scikit-learn

[GitHub](#) | [Live Demo](#)

- Engineered an end-to-end analytics pipeline for **99,440** orders (**R\$16.08M** revenue), combining data across **8** linked tables and running **7** statistical analyses to uncover a **R\$6.03M** revenue concentration in São Paulo (**37.5%** of total) on **AWS** cloud infrastructure.
- Developed **Random Forest** models predicting delivery delays (**ROC-AUC 0.737**) and review scores (**R² = 0.216**), and grouped **96,095** customers by purchase behavior (**K-Means**, silhouette **0.497**), finding the top customer segment spends **2.1x-7x** the average depending on method.
- Deployed a **5-page Power BI** and live **Plotly** dashboard surfacing that only **3.12%** of customers ever place a second order, reframing retention strategy from slowing decay to converting first-time buyers.

TECHNICAL SKILLS

Languages: SQL, Python (Pandas, NumPy)

Data Analytics & ML: Exploratory Data Analysis, Statistical Analysis, Machine Learning (Scikit-learn, Random Forest, K-Means), Root Cause Analysis

Visualization: Tableau, Power BI, DAX, Streamlit, Microsoft Excel, PowerPoint

Data Engineering, Cloud & Warehousing: Snowflake, AWS (S3, Glue, Athena), dbt, Terraform

AI & Automation: Claude Code (Agentic Workflows), n8n, Git/GitHub Actions (CI/CD)

EDUCATION

Marian Engineering College

2021 – 2025

Bachelor of Technology, Computer Science Engineering

Thiruvananthapuram, Kerala

CERTIFICATIONS

Google Data Analytics Professional Certificate (In Progress)

Deloitte Data Analytics Job Simulation – [Link](#)
